## LAB EXPERIMENT 2 - AUTOPSY

### Questions:

**Q6. When was the last recorded computer shutdown date/time?**

**Ans: 2004/08/27-10:46:27**

The path followed for identifying the time :

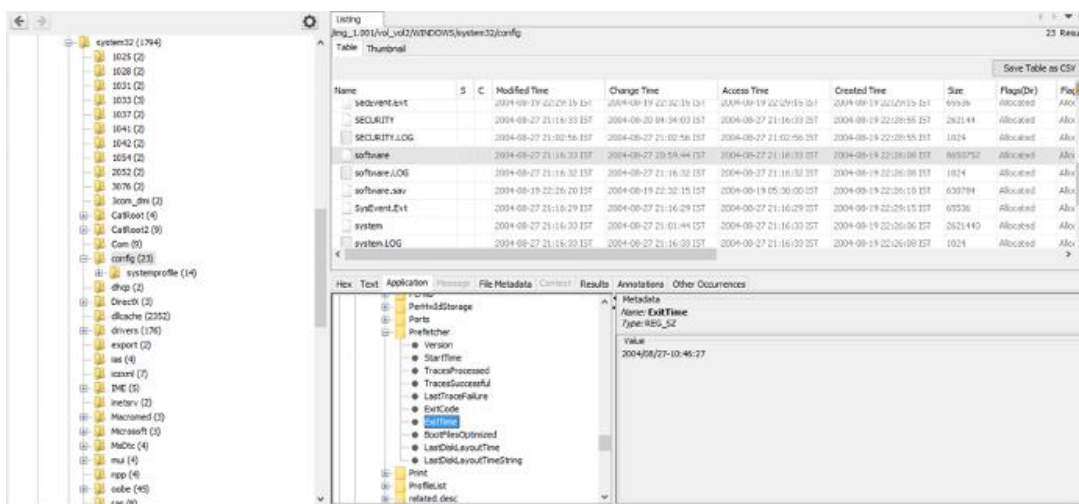

After the image, we need to click on C:\Windows\System32\Config in the left hand panel it consists of all the configuration files.

In the centre panel, after config we find out the software column that includes Microsoft\WindowNT\Currentversion

After that we can click on Prefetcher exploring all the folders as in prefetcher we find several time mentioned and we have to look for exit time:

Prefetcher\ExitTime - that denotes the last decorded shut down time.

**C:\WINDOWS\system32\config\software\Microsoft\WindowNT\CurrentVersion\Prefetcher\ExitTime**

## Q7. How many accounts are recorded (total number)?

**Ans: 5 accounts**

<<Looking at the Account Type as it says “ default admin user”>>

In the results , extracted content has the OS user accounts. We found OS information in last lab activity , similarly we find OS User Account tab.

In the left side panel, we go to **Results > Extracted Content > Operating System User Account(listing section)**

**Q8. Who was the last user to logon to the computer?**

**Ans: Mr. Evil**

(Check via *Date Accessed* column, beside Account Type similarly in Q7. above)  
In bottom we look for results and beside its mentioned as recent activity

**Q9. List the network cards used by this computer?**

**Ans: Xircom CardBus Ethernet 100 + Modem 56 (Ethernet Interface)**

**Compaq WL110 Wireless LAN PC Card**

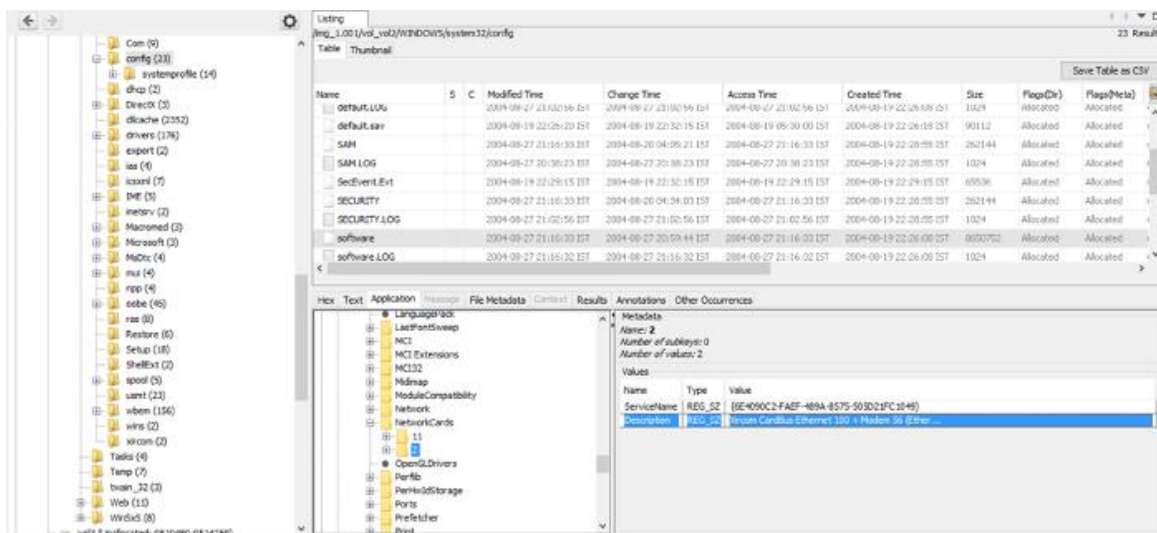

The details we need to find out belongs to configuration system files hence we follow the same path as in the Q6.

*C:\WINDOWS\system32\config\software\Microsoft\Windows NT\CurrentVersion\* and since we need to find network cards we get a folder named as network cards and we explore it.

After clicking on network cards we find two folders

We explore both of them and find the details

**We find answer at C:\WINDOWS\system32\config\software\Microsoft\Windows NT\CurrentVersion\NetworkCards<<we get 2 cards>>**

**Q10. What is the IP address and MAC address of the computer?**

**Ans:** IP=192.168.1.111

MAC=00:10:a4:93:3e:09

[illegible]

Mostly the ip addresses are found in domain areas, in program files we find out several folders since we need to look for IP and Mac address after exploring most of the folders I find Look@LAN

In that we find several options after exploring them I land into irunin.ini file that contains IP and MAC address

**We go to *C:/Program Files/Look@LAN/irunin.ini***
